1. Application Purpose

Although having many sophisticated applications and well-developed website for students to access their academic content. The College is still failing to meet the student requirements by missing one or the other major features and functionalities in their provided mobile application.

Most of the students on campus spend their time using their smartphone as they find it easy to access any information on the go rather than accessing a laptop. So, we believe that a mobile application should be developed which addresses all the features that the college is lagging.

Below mentioned are the features which a student can access on the move

- Campus Navigation
- Student Lockers services
- Library services
- Canteen services
- Campus Jobs
- Events
- Conestoga Campus Bus
- Instant Help Support if needed

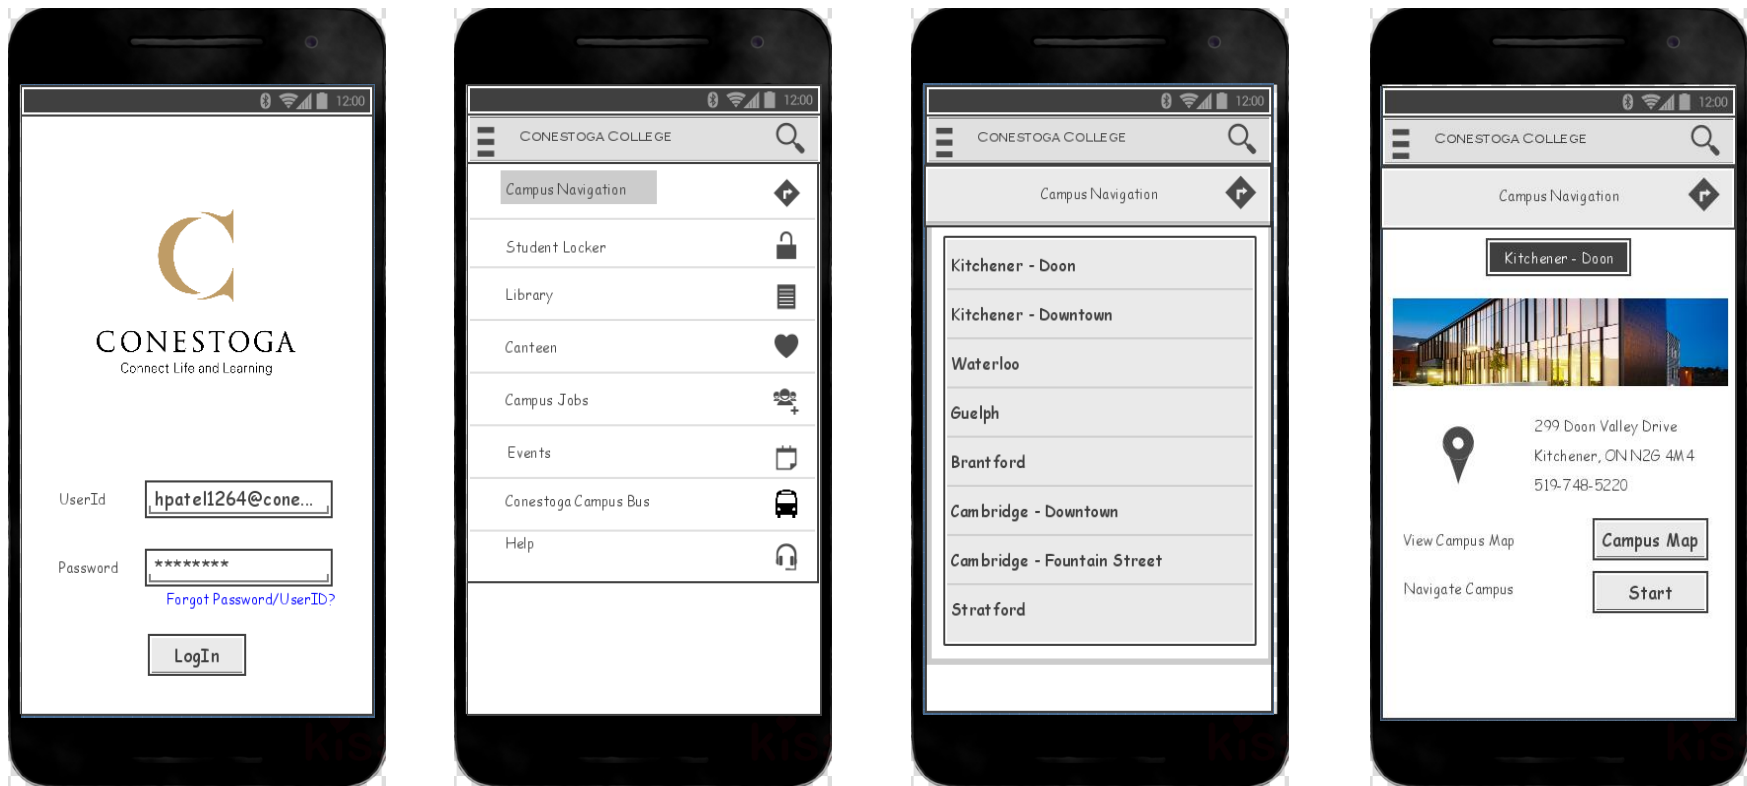

Many ideas other than these can be implemented, but these are the basic features which must be implemented as they can be easily developed within a short span of time and can provide some relief to the students. Other ideas which requires an investment of time, effort and resources can be implemented later.

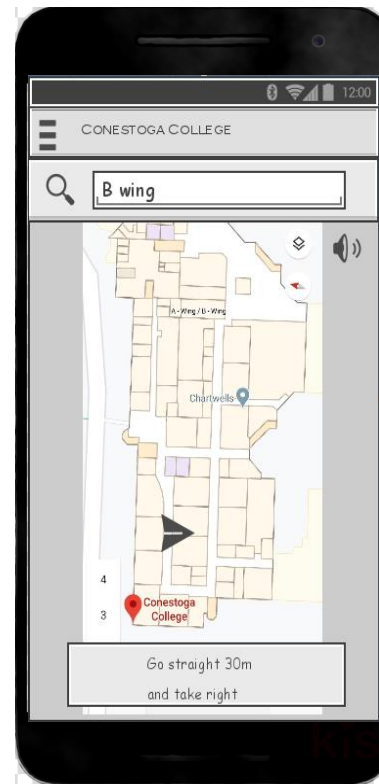

2. EPIC AND USER STORY

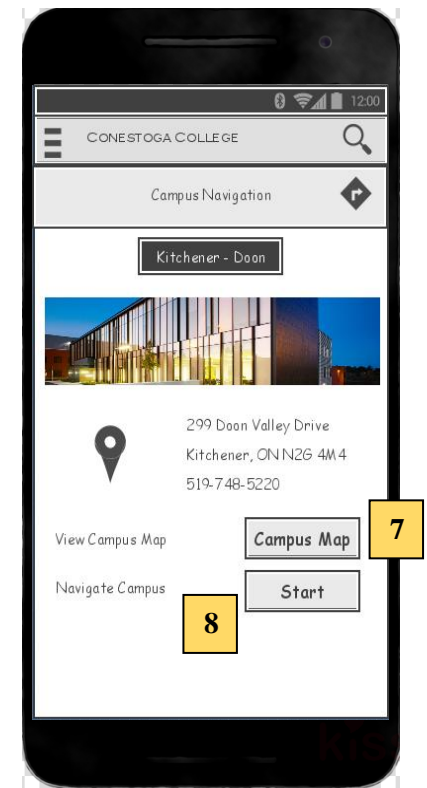

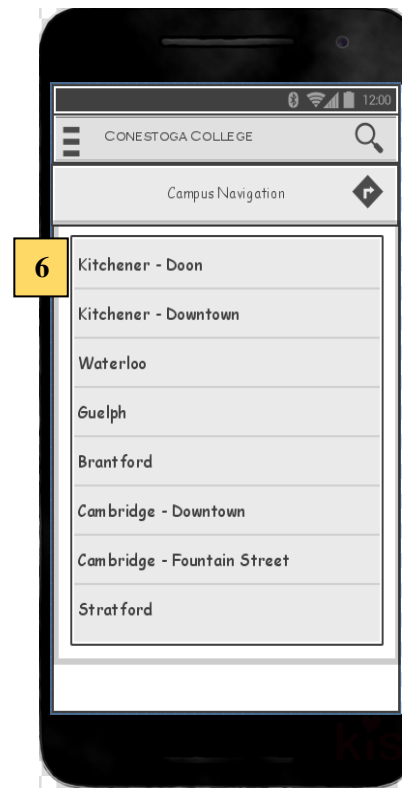

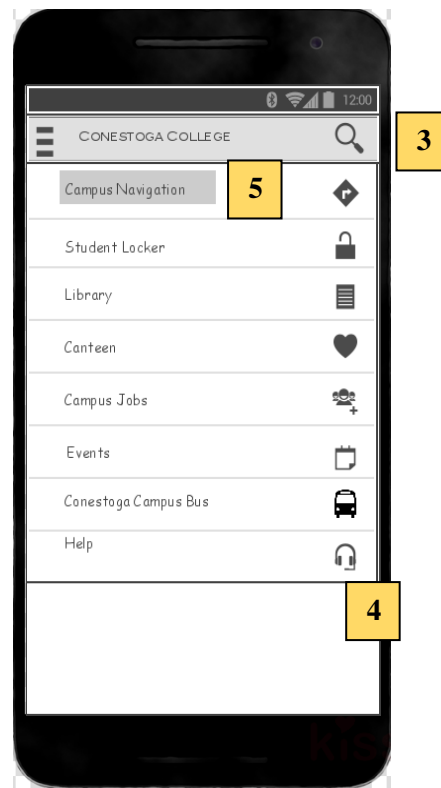

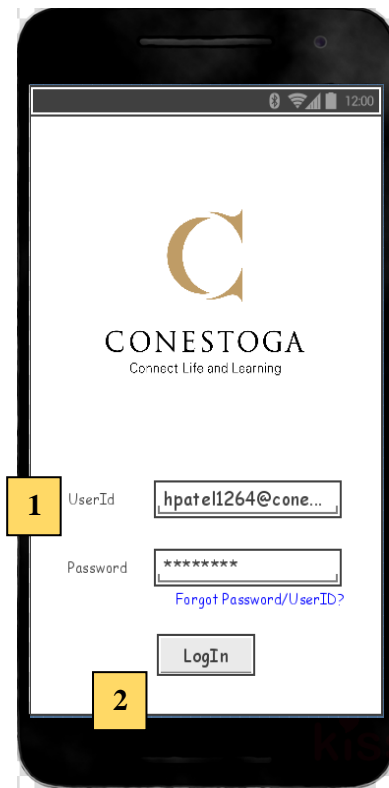

THEME: College Campus Navigation

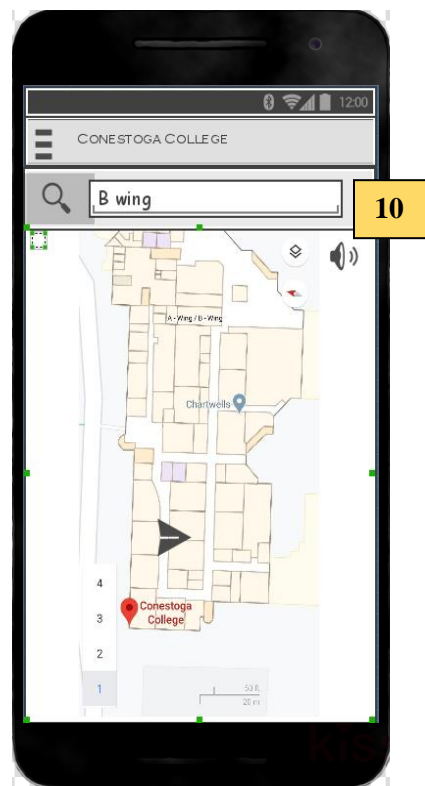

3. Wireframe

4. Functional Document for Annotated wireframe

Screen 1: User Login Page				
#	Type	Text	Action	Comments
1	Text box	[Null]	Enter ID	User enters their user id
2	Button	Next	Login in to the app	User clicks on the button

Screen 2: Home Page				
#	Type	Text	Action	Comments
3	Image Button	Search (Image)	Hit Search	User hits the button to search.
4	ListView	Student locker, Library, Canteen, etc.	User moves to next page.	ListView for user to select any function.
